

Fed up of costly repairs to your damaged cubicle door locks? Tired of trying to find the right nuts and bolts to replace them?...

Replacement Indicator Bolt is the perfect solution.

BEFORE

AFTER

The cover plate is large enough to hide any unsightly damage leaving the panel looking like new.

This new, high quality bolt system is designed to replace broken cubicle door locks and can be fitted quickly and easily to all standard door thicknesses. The bolt consists of two large cover plates to conceal the holes from previous drillings and eliminates the hassle of finding a new lock with compatible screws, so there's no need to replace the door panel – saving you valuable time and money!

Preventing future damage

Additional features include a coin release mechanism which allows it to be opened from the outside in an emergency, and an innovative Break-Lock component which releases the lock keep when the bolt comes under excessive pressure.

PREVENT THIS...

BY FITTING ONE OF THESE...

The unique Break-Lock feature will prevent damage to the pilaster when it is subject to excessive force.

Break-Lock system is a major advancement in cubicle lock design. It works as a barrier between the lock keep and the pilaster preventing any future damage and taking the hassle out of costly repairs.

The bolt comes in a satin anodised finish as standard. Other colours are available on request, including a bright eye-catching primary range for schools.

Break-Lock in the home

Our unique Break-Lock component can also be installed on domestic interior doors making it ideal for social housing or shared accommodation. The system successfully reduces the risk of frame damage whenever the door is subjected to force or can act as an 'easy fix' safe closure to replace a broken door handle.

The Break-Lock is sturdy, simple to install and fits wooden door frames up to 44mm thick, ensuring security and peace of mind for the occupant. The discreet Break-Lock can be purchased separately and retrofitted to compliment an existing lock.
